TRICH is near

Claim 5; disorders

Page 140-141; 160pp; English.

The present sequence is transporter and ion channel (TRICH-1) cDNA. TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral sclerosis, cystic fibrosis, Becker's muscular dystrophy, Charcot-Marie Tooth disease, Duchenne muscular dystrophy, angina and hypertension, neurological disorders including Alzheimer's disease, amnesia, bipola

The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention treatment of hexose transport disorders such as ischaemia, diabetes, because the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the cont

                                                        The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1717
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1767
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1667

```

Human proteins with hydrophobic domains and the nucleic acids er them, useful for preventing diagnosing and treating e.g. cancer, Alzheimer's useful for preventing diagnosing imer's and inflammation encoding

Claim 4; Page 287-289; 563pp; English.

The present sequence is human protein with hydrophobic domain encoding cDNA clone HP10784. The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides may be used to produce the polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The polynucleotides and its complementary sequences may also be used as DNA probes in diagnostic assays and also used in gene therapy. The polypeptides may also be used as antigens in the production of antibodia and in assays to identify modulators of polypeptide expression and activity. The polypeptides and nucleic acids may be used as nutritional antibodies

The GLUTX proteins are related to the facultative glucose carriers GLUTI-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention a treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is the coding sequence

                                             The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is the coding sequence for human GLUTX3.
                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding GLUTX glucose transporter proteins, useful the prevention, diagnosis and treatment of hexose transport disorce.g. is chemia and diabetes -

```

This sequence represents human transport-associated protein-1 (TRANP-1) CDNA. The DNA sequence was first identified in a human colon tissue cDNA library. The full-length cDNA was derived from a series of overlapping and/or extended cDNA sequences and is a consensus. TRANP-1 to 9 (AAY31639-Y31647) are a novel group of proteins with chemical and structural homology that are involved in molecular transport. Various disorders are associated with defects in the transport of molecules, either intracellularly or to the extracellular environment. Examples of such disorders include cystic fibrosis, multidrug resistance, hypercholesterotaemia and certain forms of diabetes mellitus. Defective nuclear transport may play a role in cancer. For example, the BRCA1 protein, associated with familial breast cancer, is normally imported into the nucleus via nuclear pore complexes, but is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                insufficient molecular transport. Anti-TRANP antibodies and nucleic acids encoding TRANP can be used as diagnostic tools for such disorders. TRANP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                aberrantly located in the cytoplasm in breast cancer cells. In other cancers, cells can secrete excessive amounts of hormones e.g. cancer the adrenal medulla can secrete excessive amounts of adrenaline and noradrenaline, leading to hypertension.
